

Desi Dhamaka Website & Admin CMS

Project summary for leadership review — June 30, 2026

Executive summary

We built and deployed a full restaurant website with a content management system (CMS) for Desi Dhamaka. The public site lets customers browse the menu, view offers, make reservations, and read reviews. The admin dashboard lets staff update content without touching code.

The system is live on a demo URL today, connected to a real database and authentication backend. It is ready for content entry and stakeholder review before pointing at the production domain (desidhamakanj.net).

What was built

Part	Purpose	Users
Public website	Menu, gallery, offers, reservations, contact	Customers
Admin dashboard	Manage all site content from one place	Staff / managers

Technology stack

Layer	Technology
Frontend	React 18 + TypeScript + Vite
Hosting	Netlify (HTTPS, global CDN)
Backend	Supabase (PostgreSQL, Auth, Storage)
Source code	GitHub: dd3-restaurant-cms

How it works

Customer visits public site !' Netlify serves pages !' content loads from Supabase.
Staff logs in at /admin/login !' Supabase Auth !' admin role check !' edits content in dashboard !' changes save to Supabase !' public site updates within ~60 seconds.

Work completed — phase by phase

Phase	Deliverable
Foundation	Public pages + admin UI wired to Supabase
Phase 15	Row Level Security, hardened auth, safe user provisioning
Phase 16	Admin-only dashboard; staff access denied by design
Phase 17	Footer/contact/reservations from Settings; smoke test docs
Phase 18	Launch checklist (infra, SEO, security)
Phase 19	Meta tags, JSON-LD, sitemap, robots.txt
Phase 20	Demo deployment on Netlify + env configuration

Deployment completed

Netlify

- Site: desi-dhamaka-admin
- Live URL: <https://desi-dhamaka-admin.netlify.app>
- Admin: <https://desi-dhamaka-admin.netlify.app/admin/login>
- Env vars: VITE_SITE_URL, VITE_SUPABASE_URL, VITE_SUPABASE_ANON_KEY

Supabase

- 6 database migrations applied (tables, RLS, storage)
- Admin user created and promoted to admin role

Issues resolved during setup

Issue	Resolution
Invalid login credentials	Switched to legacy anon API key; redeployed
Access denied	Set user role = admin in database
public.users missing	Ran all migrations; created admin profile

What the admin can manage

Area	Capabilities
Homepage	Hero, images, about section, CTAs
Menu	Categories, items, prices, images, active/inactive
Gallery	Images, captions, featured/visible
Offers	Promotions, banners, dates
Reviews	Approve/reject submissions
Reservations	View and manage bookings
Settings	Name, phone, email, address, hours, logo, social

Security

- Email + password required for admin access
- Only admin role can use the dashboard
- Row Level Security on database tables
- Service-role keys not exposed in frontend
- Admin area blocked from search engines

Current status

Item	Status
Demo site live	Complete
Admin CMS working	Complete
Database & storage	Complete
SEO basics	Complete
Production domain	Not yet connected (demo only)

Recommended next steps

- Populate content via admin (menu, homepage, settings, gallery)
- Stakeholder review on demo URL
- Connect desidhamakanj.net/lawrenceville to Netlify when approved
- Create staff accounts with appropriate roles

- Run final QA / smoke test on production URL

One-liner for leadership

"We delivered a modern restaurant website with a secure admin CMS, deployed it to a live demo environment, connected it to a cloud database, and resolved authentication and database setup so the team can manage menu, homepage, and bookings without developers — ready for content fill and production domain switch when approved."
